

Success through Mass-customization in the apparel industry

Author: K. Schiller
Projects Mass-customization

Size survey - Measurement of a population to review the size system and obtain new size charts

Why do we need to get new body measures?

- Every industry in relation with the human body requires statistics about the human body morphology: apparel, furniture, workstations & ergonomics,...
- Because consumer expectations are changing
 - 77,9% Good Fit
 - 39,1% Quality
 - 37,1% Personalization
- Competitive advantages
- The population is changing
 - **XXL phenomena**
- Miss-fit problems cost a lot :
 - 9.7 billions € per year in Germany, source Zitex
 - 28 billions \$ per year in USA, source Store Online

Fitting - Customized garment based on the consumer morphology

Fitting - Customized garment based on the consumer morphology

Individuality – configuration of cloth (fabrics, color, modules,...)

Size fit – for retailers and army (search for the best fitting size)

3D BODY SCANNER: A REVOLUTIONARY TECHNOLOGY

Virtual Double Twin

Size	Body Height	Chest Girth	Waist Girth	Bottom Girth	Jacket Length	Arm Length	Waist Band Girth	Inseam
44	168	88	80	96	74,5	59	76	76
46	171	92	84	100	76	60,5	80	78
48	174	96	88	104	77,5	62	84	80
50	177	100	92	108	79	63,5	88	81
52	180	104	96	112	80,5	65	92	83
54	182	108	100	116	82	66,5	96	84
56	184	112	106	120	83,5	68	102	85
58	186	116	110	124	84,5	69	106	86
60	187	120	116	128	85,5	70	112	87
62	188	124	122	132	86,5	71	118	88
64	189	128	126	136	87,5	72	122	89
66	190	132	130	140	88	72,5	126	89
68	191	136	134	144	88,5	73	130	89

How to prepare a protocol of scan?

- Definition of the expected measurements list
 - Depends of the sectors associated to the campaign
 - Apparel, automotive, Ergonomics...
 - Do we need several postures (sitting posture)?
- Process of scanning
 - How to measure the stature (height gauge or hair caps)?
 - How to correct the feet spread?
 - Which measurements have to be re-positionned during the scan?
 - Which measurements are obtained automatically (from the 97 existing)?
 - Which measurements are obtained interactively?
 - Which measurements are obtained manually? (foot and head measurement)
- With these figures we know how long time do we need for 1 person

How to prepare a protocol of scan?

- Definition of the back office process
 - How to consolidate the results of the scan session?
 - How are the data exchanged (CD, network,...)?
 - Excel file or Database?

Size	Body Height	Chest Girth	Waist Girth	Bottom Girth	Jacket Length	Arm Length	Waist Band Girth	Inseam
44	168	88	80	96	74,5	59	76	76
46	171	92	84	100	76	60,5	80	78
48	174	96	88	104	77,5	62	84	80
50	177	100	92	108	79	63,5	88	81

68	191	136						

- **In the boutique**
 - 3D scanner
 - AutoMeasure software
 - **Fitnet Store**, to determine the consumer order (style, fabric, accessories, components, measurements)
- **On line manufacturing**
 - **Fitnet Server**, to apply alterations
 - Pattern/marker making
 - Single ply cutter

ADVANTAGES OF THE 3D BODYSCANNER

- Better than a manual measurement (fast, accurate and reliable)
 - **Without any contact**
 - **Accuracy:**
 - Manual: from 2 to 10 cm
 - 3D Scanner: from 0,2 to 2 cm
 - **3D laser triangulation technology is less sensitive to light effects and to body movements**
- 
- The 3D virtual twin can be used without the original !!
 - **To control or to extract new measures**
 - **To control the posture**
 - The measurement analysis can be managed off-line
 - The positions and the definitions of the measures are stored with the 3D virtual twin
- 

Garment measurements calculation

With 1 measurement the system calculates automatically the reference standard size of the customer

Measurements (cm)	 7
Initial anthropometric measurements	100
Body measurements	98
Differences	0
Garment measurements	147.5
Init values	
Reset	

 4	 13	 14	 33
40.34	65	43.85	43
42	67	43.85	43
1.66	2	0	0
45.66	61.5	64.7	76.5

All associated measurements are displayed and modified according to the customer specifications

... and then, the order is completed
